

Door RESTRICTOR

Door restrictors improve passenger safety by effectively latching the cab door from the outside in the event of system failure. This device keeps passengers secure inside the cab and prevents exiting in between landings if an emergency should occur.

Overview

SYSTEMS AVAILABLE FOR UPDATE:

Door restrictors are an universal application that can be installed on all OEM elevator systems.

BENEFITS

- Universal application
- Improves passenger safety
- Reduces liability exposure
- Code compliant for existing mandate

Important Note

It is crucial to communicate to building tenants and personnel that remaining inside the cab is the safest place in the event of a system shut down or entrapment. Technicians and qualified help are in route to resolve the issue. Non-compliance could potentially result in serious injury.

**(There are several solutions available for door restrictors with varying applications. Consult with your Fujitec sales associate to determine the best solution for your building.)*
